

Assignment – 1

Basic program about(flask and fast API)

About FastAPI

- Modern, **high-performance** framework
- Built on **Python type hints**
- Automatically generates docs
- Very fast (used in production apps)

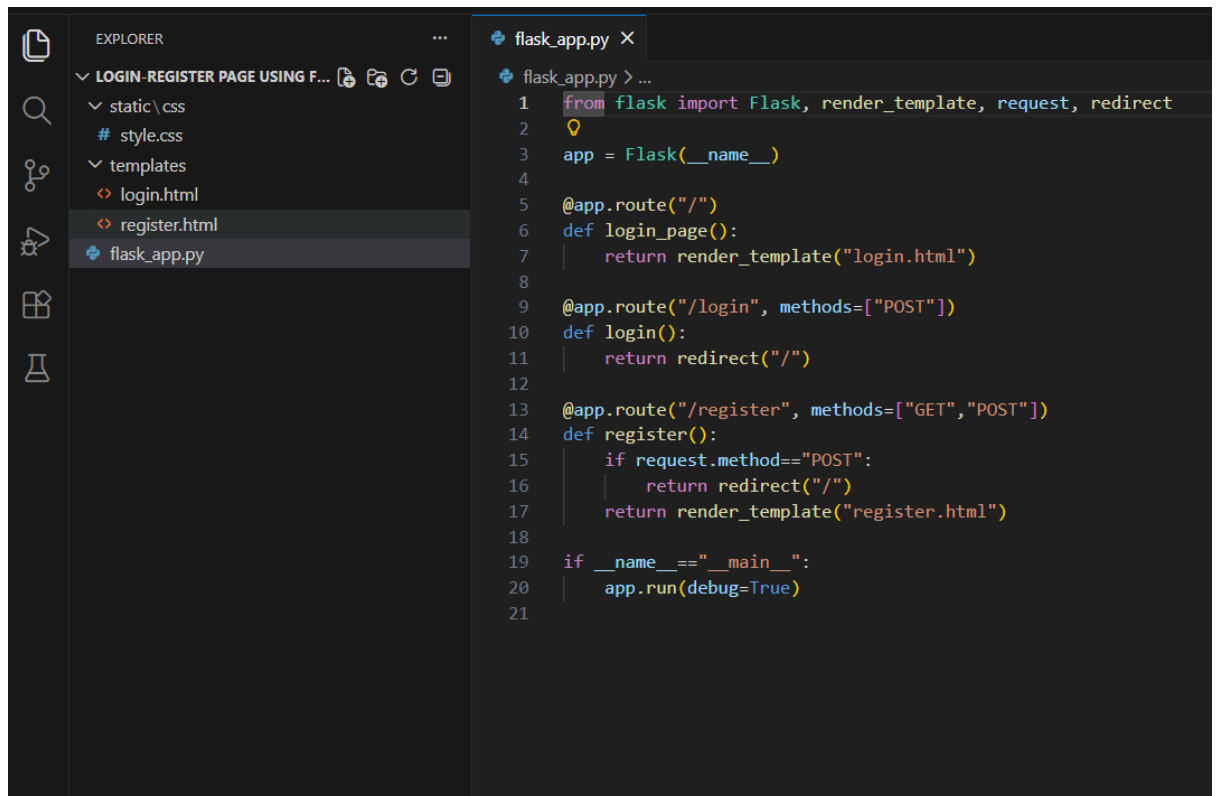

About Flask

- Flask is a **lightweight web framework**
- Easy to learn (best for beginners 👍)
- Gives you **full control** (you add features yourself)
- Used for:
 - Small web apps
 - APIs
 - Backend projects

When to Use What?

- 👉 Use **Flask** if you're starting or building simple projects
- 👉 Use **FastAPI** if you're building APIs or want better performance

1. Go to file explorer and open the file and then in folder click on flask app.py

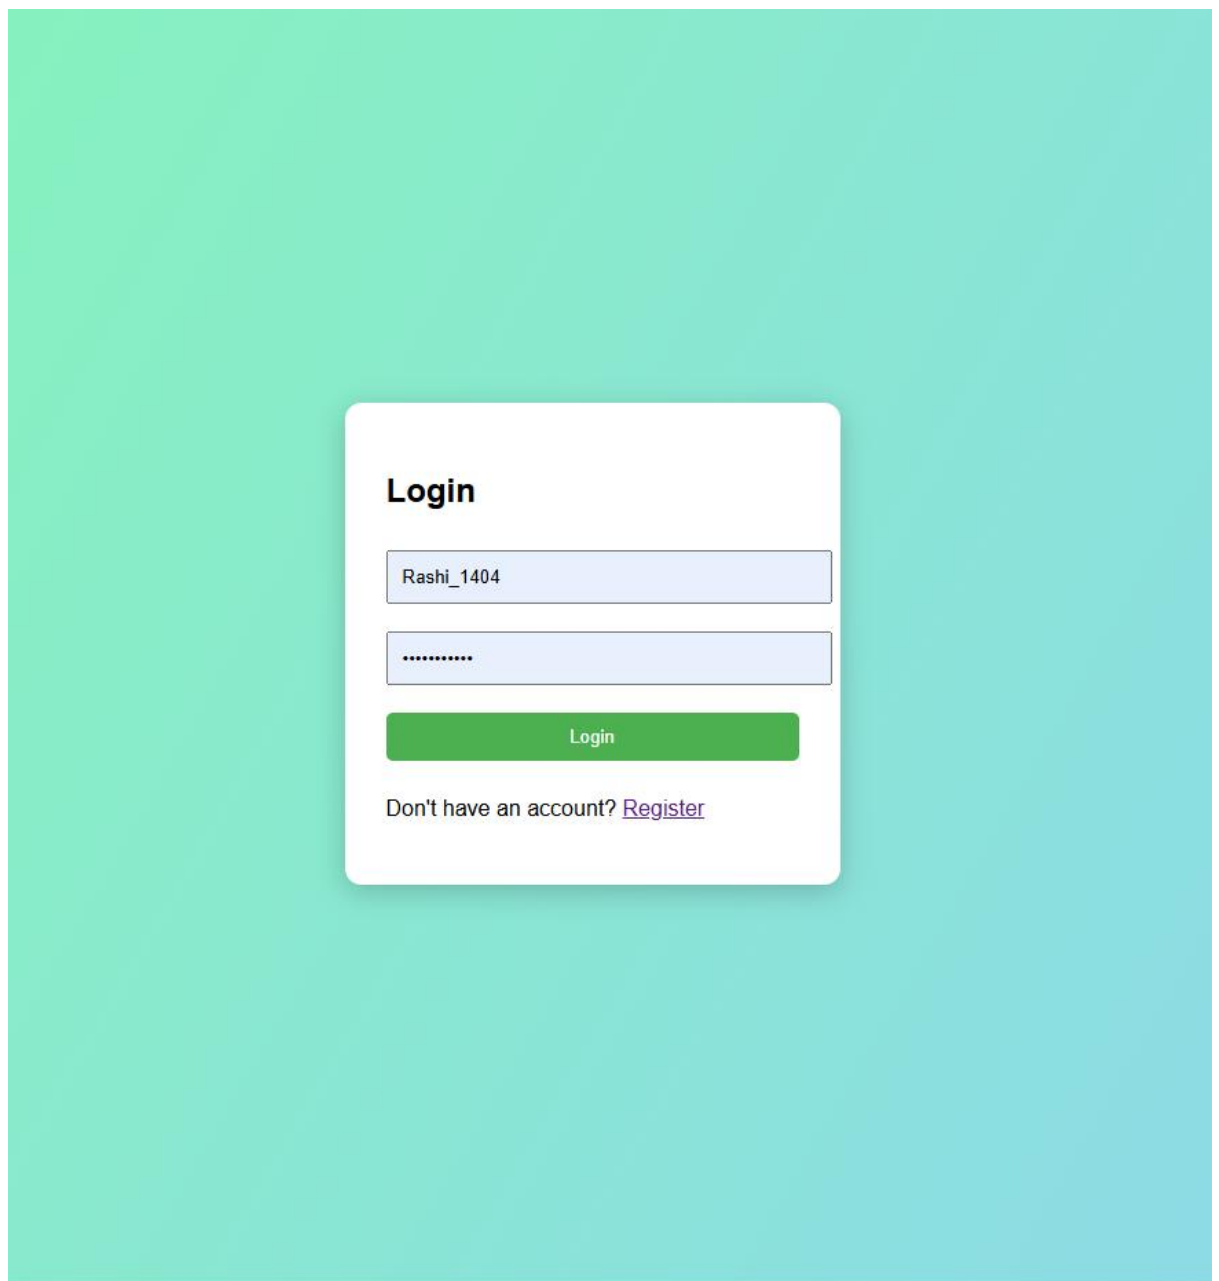

```
flask_app.py X
flask_app.py > ...
1 from flask import Flask, render_template, request, redirect
2
3 app = Flask(__name__)
4
5 @app.route("/")
6 def login_page():
7     return render_template("login.html")
8
9 @app.route("/login", methods=["POST"])
10 def login():
11     return redirect("/")
12
13 @app.route("/register", methods=["GET", "POST"])
14 def register():
15     if request.method=="POST":
16         return redirect("/")
17     return render_template("register.html")
18
19 if __name__=="__main__":
20     app.run(debug=True)
21
```

2. Run the flask app.py

```
PS C:\Users\Rashi\Downloads\login-register page using flask(assignment 1)> & C:/Users/Rashi/AppData/Local/Python/pythoncore-3.14-64/python.exe "c:/Users/Rashi/Downloads/login-register page using flask(assignment 1)/flask_app.py"
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.

```

3. Go through the link and then register page will open :

code :

flask_app.py X

flask_app.py > ...

```
1  from flask import Flask, render_template, request, redirect
2
3  app = Flask(__name__)
4
5  @app.route("/")
6  def login_page():
7      return render_template("login.html")
8
9  @app.route("/login", methods=["POST"])
10 def login():
11     return redirect("/")
12
13 @app.route("/register", methods=["GET", "POST"])
14 def register():
15     if request.method=="POST":
16         return redirect("/")
17     return render_template("register.html")
18
19 if __name__=="__main__":
20     app.run(debug=True)
21
```
