WELLBOT - AI HEALTH & WELLNESS CHATBOT

Introduction

Content:

1. Growth of digital healthcare systems
2. AI chatbots assisting users
3. Importance of health monitoring

Nowdays technology plays an important role in healthcare.

Many people prefer online health support systems.

AI chatbots can provide instant responses and guidance.

Problem Statement

1. Lack of easy access to health guidance.
2. Difficulty tracking health regularly
3. Limited mental wellness support
4. This creates the need for a smart health assistant system.

1. Many people cannot visit doctors for small health questions.
2. Also, people find it difficult to track their health information regularly.

Proposed Solution

Wellbot system that provides:

1. AI chatbot assistance.
2. Health dashboard.
3. Wellness suggestions.

The propossed system is wellbot, which provides an AI based chatbot platform.

It allows users to ask health questions and guidance instantly.

The dashboard helps users monitor their health data.

Objectives of the Project

1. Provides instant health assistance
2. Improves mental wellness support
3. Track health data
4. Support multiple languages

To create an AI – based wellness chatbot

To provides fitness, nutrition, and stress guidance

To allow users to track health data using dashboards.

System Architecture

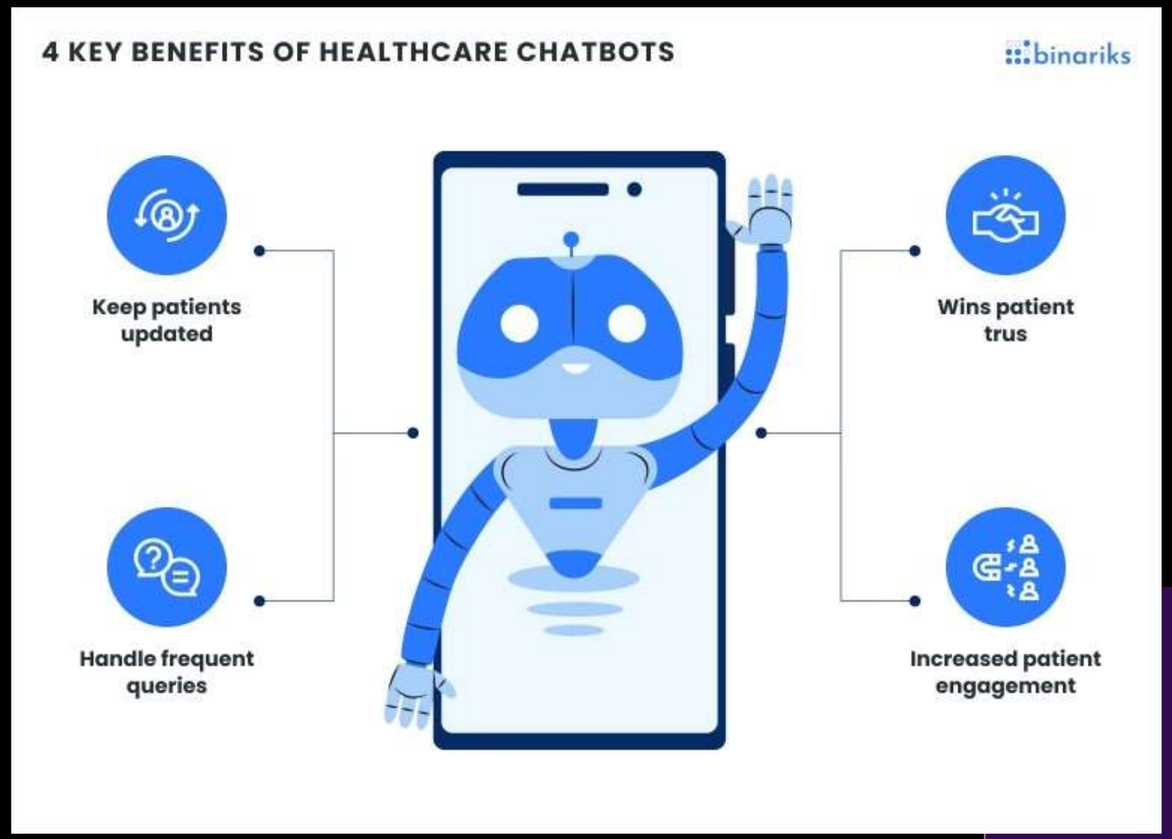
Frontend – HTML, CSS JS

Backend – Python, flask

Database – SQLite

AI Model – chatbot logic

Language Module – Translation system



Backend Implementation

1. Flask framework
2. Handles user request
3. Connects frontend and database

The backend of the system is built using Flask framework in python.

The main file is app.py which contr

1. User login
2. Chatbot interaction
3. Dashboard data

AI Model

The logic of the chatbot is implemented in the file ml_model.py

It processes user question and generates appropriate response.

This makes the chatbot interactive and intelligent

Database Design

CONTENT

1.SQLite database
2.Stores user data
3.Chat histroy storage

The system uses SQLite database

The database stores:

1.User information
2.Login credentials
3.Chat records and health data.

User Interface

1. Landing.html
2. Login.html
3. Dashboard.html
4. chat.html
5. admin.html

This page allows users to chat with the AI assistant. The chatbot responds to health- realted queries.

Multilingual Support & Technologies Used

The system includes language switching functionality.

Users can change the interface language.

This improves accessibility for different users.

Python and Flask
HTML,CSS, JS
SQLite Chart.jsThese technologies work together
to create a complete web-based hatbot system

THANK YOU
